

Introduction:

Your online batch processing credit card machine on the Internet. All you need to do is provide us with a list of transactions to process and we do it for you – no fuss and your transactions are settled to your bank account overnight.

Benefits of Batch Processing:

- Simple and Secure
- Easy to use
- Low transaction charges
- Comprehensive documentation available for download from our website
- Send us a batch of transactions and we'll notify you when they have been processed
- Simple file layout enables easy integration to your current systems

How PayBatch Works:

Large numbers of credit card transactions can be processed using PayBatch. The merchant can create a batch file with details of the credit card transactions they want to process. This batch file can either be uploaded via the DPO PayGate Back Office or submitted via a SOAP web service. PayGate will process the transactions and then make another file available for download with the transaction status of each transaction included in the batch.

Compatible Payment Methods

PayBatch is compatible with the following available payment method:

Credit Card	✓

Compatible Banks

The following banks are able to process Batch Payments:

Standard Bank	✓
Nedbank	✓

How to get started:
